Partner Health Check – Performance

The Partner Health Check – Performance (PHC-P) is a performance-focused analytics dashboard designed to provide real-time visibility into partner support and operational metrics. It serves as a strategic tool for partner managers, operations teams, and leadership to monitor SLA compliance, partner responsiveness, and overall operational efficiency.

I. Business Perspective

The "Partner Performance Visibility Gap" Challenge:
Without a consolidated view of partner operations, organizations face risks that can impact SLA adherence and collaboration:

- **SLA Compliance Risk:** Difficulty in tracking First Reply Time (FRT) and Resolution Time (RT) may lead to missed service-level commitments.
- **Operational Inefficiency:** Lack of visibility into ticket volume and partner responsiveness can create bottlenecks and delays.
- **Performance Blind Spots:** Inability to monitor partner efficiency prevents proactive coaching or performance improvement initiatives.
- **Historical Trend Limitations:** Without historical benchmarking, it is difficult to evaluate partner performance trends and plan interventions.

Strategic Impact & Decision Support:
The PHC-P transforms raw ticketing and operational data into actionable insights to drive partner excellence:

- **Proactive SLA Management:** Highlights tickets approaching SLA breaches to enable timely intervention.
- **Operational Optimization:** Insights into ticket trends help allocate resources effectively and manage partner workloads.
- **Partner Performance Insights:** Evaluates responsiveness, resolution efficiency, and overall support effectiveness.
- **Continuous Improvement:** Tracks recurring issues or delays for process improvement and enhanced collaboration.

II. Technical & Functional Perspective

Key Performance Indicators (KPIs):

All metrics are normalized for clarity and confidentiality:

- **Tickets per Month:** Tracks monthly ticket volume to monitor partner workload.
- **Total Tickets:** Provides an aggregate view of tickets handled by partners.

- **First Reply Time (FRT):** Measures the average time to first response, reflecting partner responsiveness.
- **Resolution Time (RT):** Tracks average time to fully resolve tickets, reflecting operational efficiency.
- **Customer Satisfaction (CSAT):** Aggregated satisfaction score from partner interactions.
- **Missed TRO:** Tickets that breached SLA or missed resolution targets.

Operational Features & Architecture:

- **Multi-Timeframe Analysis:** Combines live, snapshot, and historical views to track partner performance trends over time.
- **Data Governance:** Ensures all metrics are accurate, validated, and up-to-date via SQL and Power BI pipelines.
- **Drill-Down Capabilities:** Allows management to analyze performance at partner, team, or ticket level for root cause identification.
- **Predictive Insights:** Forecasts potential SLA risks or operational bottlenecks based on historical trends.

III. Conclusion: Driving Partner Performance Excellence

The Partner Health Check – Performance dashboard empowers organizations to shift from reactive partner management to proactive operational oversight. By bridging the visibility gap in partner operations, PHC-P strengthens SLA compliance, enhances collaboration, and ensures operational efficiency.

Key outcomes of PHC-P implementation include:

- **Enhanced SLA Compliance:** Real-time monitoring ensures timely responses and resolution of partner tickets.
- **Improved Operational Efficiency:** Tracking performance metrics supports workload optimization and partner coaching.
- **Proactive Performance Management:** Early detection of potential SLA breaches enables timely intervention.
- **Data-Driven Decision Making:** Leaders can prioritize focus areas, allocate resources, and improve partner engagement based on insights.
- **Predictable Partner Performance:** Historical and current trends allow forecasting and planning for partner operations.

Ultimately, PHC-P provides the analytical rigor necessary to strengthen partner operations, ensure SLA compliance, and drive sustainable collaboration.
